

LITTLE DAVID

CaseLocker™ 60

Highest performing, safest, strongest tape cartridge in the market, the CaseLocker™ 60 tape cartridge is a masterpiece of Loveshaw's patented engineering innovations.

Built To Last: For over 50 years, Loveshaw has built quality engineered products for the packaging industry. Our Little David® CaseLocker™ line of tape cartridges are a result of challenging the notion that "today's design is the best solution." We consistently strive to engineer new products for tomorrow's packaging needs.

CAC60 Pneumatic cartridge shown

PERFORMANCE:

- Weak and void boxes processed with patent pending high speed Pneumatic cartridge.
- Light touch roller arm design requires minimal force which facilitates weak corrugated and void fill sealing.
- Multiple speed capabilities in single cartridge.
- Knife arm geometry assures consistent positive tape cutting.
- No lubrication points.

DURABILITY:

- Cartridge arms are 20% to 400% stronger than tested competitors.*
- Utilize link bar and knife arm bearings which offer a more robust bearing system vs competitor's bushings.

VERSATILITY:

- Quick and easy maintenance due to Patented quick release/tool-less rollers and blades allowing production to resume in seconds.
- Adjustable telescoping tape core easily accommodates various tape roll cores.

SAFETY:

- Patented locking knife guard prevents the blade from being exposed unless the roller arms are depressed.

ECONOMICAL:

- Easily rebuildable with low cost replacement parts.
- Three year Warranty on cartridge. Moving and wearing parts are not included. Other restrictions may apply. Contact Loveshaw for details.
- Interchangeable top and bottom cartridge (non-pneumatic.)

Tape Cartridge Innovations Implemented in 2016:

With today's sustainability efforts, some tape manufacturing companies are moving to environmentally friendly release agents in their tapes, which can add friction and added tension in the cartridge. To alleviate this and improve overall performance, we have implemented the following:

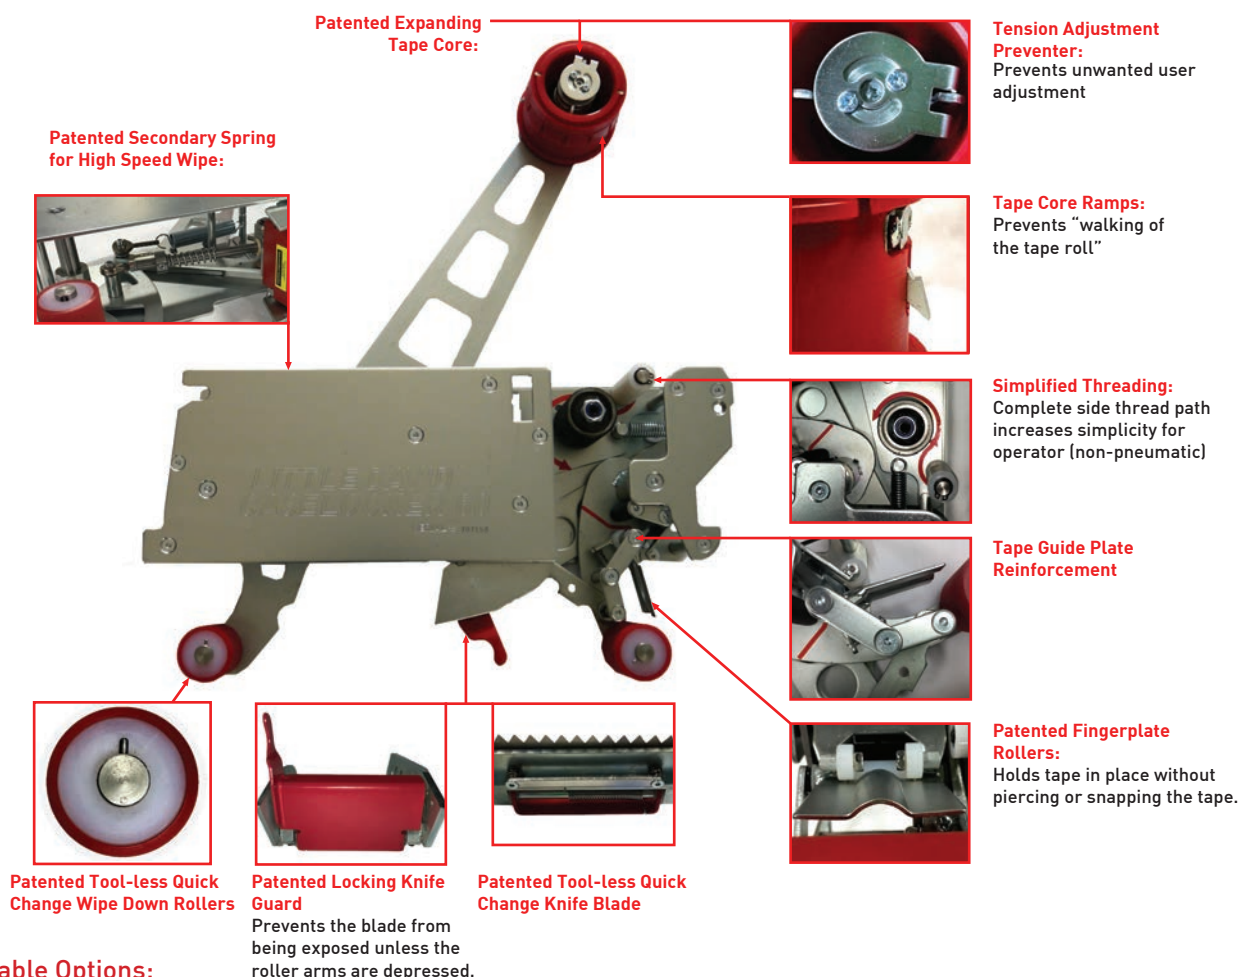

Front Roller Arm Assembly:

- Redesigned Tape Guide Plate to incorporate a roller within the plate to reduce drag.
- Shafts on roller arm tied together to eliminate cantilever issues due to increased drag.
- Additional link bar added and tied to sliding block reducing side loading stress on block.

Tape Core Modification:

- Added Tape Core Ramps to two sides of core to prevent walking of the tape roll.
- Designed Tension Adjustment Preventer to prevent unwanted user adjustment.

Highest Performing • Strongest • Safest Tape Cartridge The CaseLocker™ 60

Available Options:

- High Speed - up to 170 fmp
- High Speed Void - Pneumatic
- Low Tape Detection
- Stainless Steel
- Standard speed - up to 100 fmp
- 1" Tab Length
- No Tape Detection
- Spare Parts Kit
